

Advancements in Operational Hurricane Forecast Guidance from NCEP/EMC HWRF Modeling System

Progress in hurricane forecast improvements during the last decade since Hurricane Katrina

Vijay Tallapragada, Hendrik Tolman & Frederick Toepfer*

*NOAA/NWS/OST, HFIP Program Manager

*Ten Years Since Hurricane Katrina: Progress in Hurricane Modeling, Prediction, Decision Support, and Coastal Resilience.
Tuesday, July 28 2015*

Outline

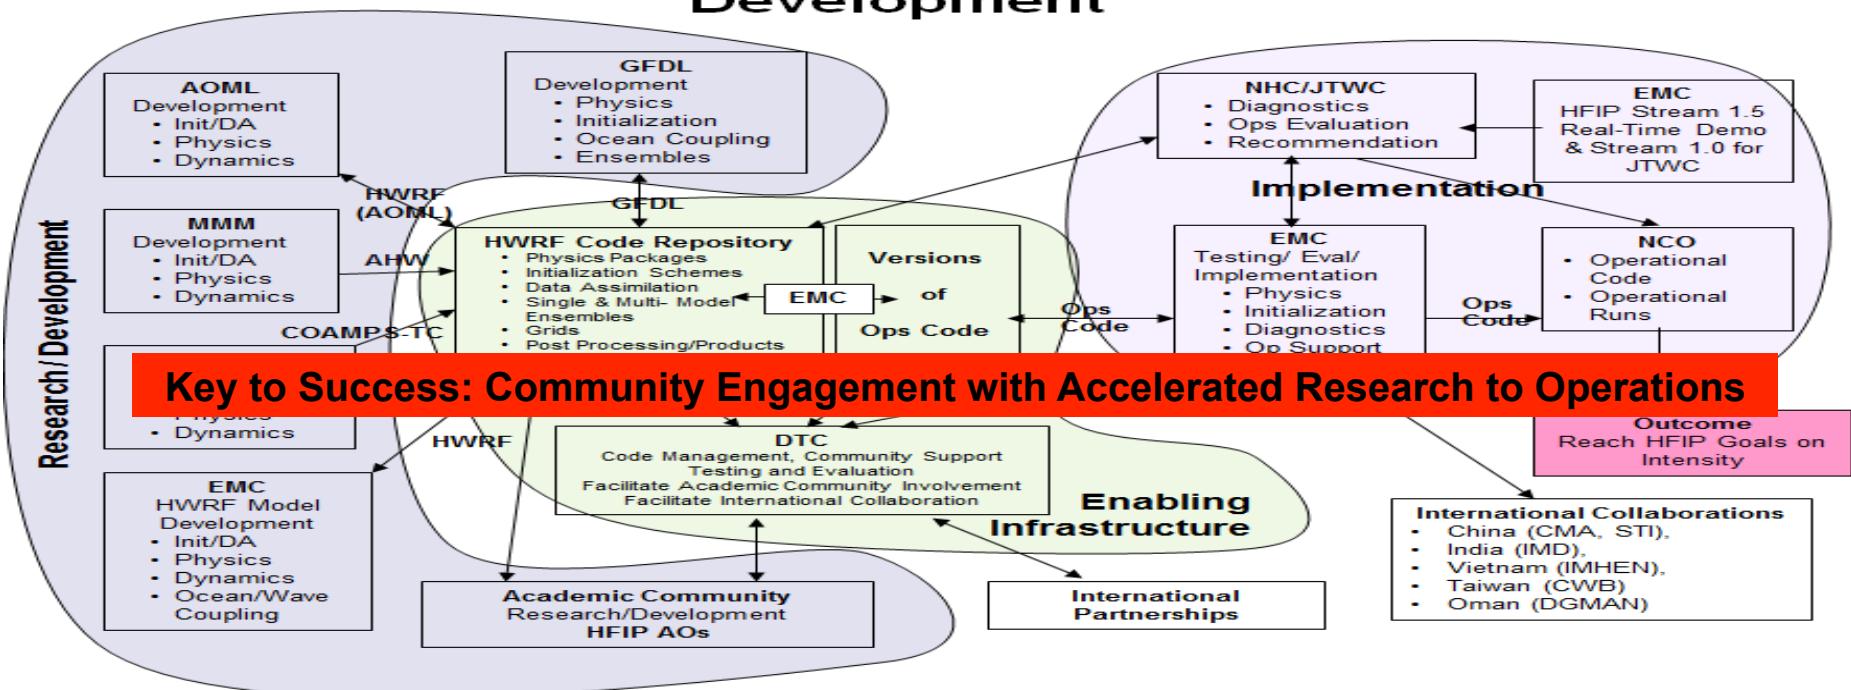

- Progress in Operational Hurricane Track and Intensity Forecast Guidance in the past few years: Role of HFIP
- State-of-the-art Operational Hurricane Modeling at NCEP/EMC: A Major Collaborative Community Modeling Effort
- Forecasts for Hurricane Katrina using today's operational HWRF modeling system
- Improved understanding of hurricane intensity problem and challenges ahead

Rapid Progress in Hurricane Forecast Improvements: Role of HFIP

Operational Hurricane Modeling System Development

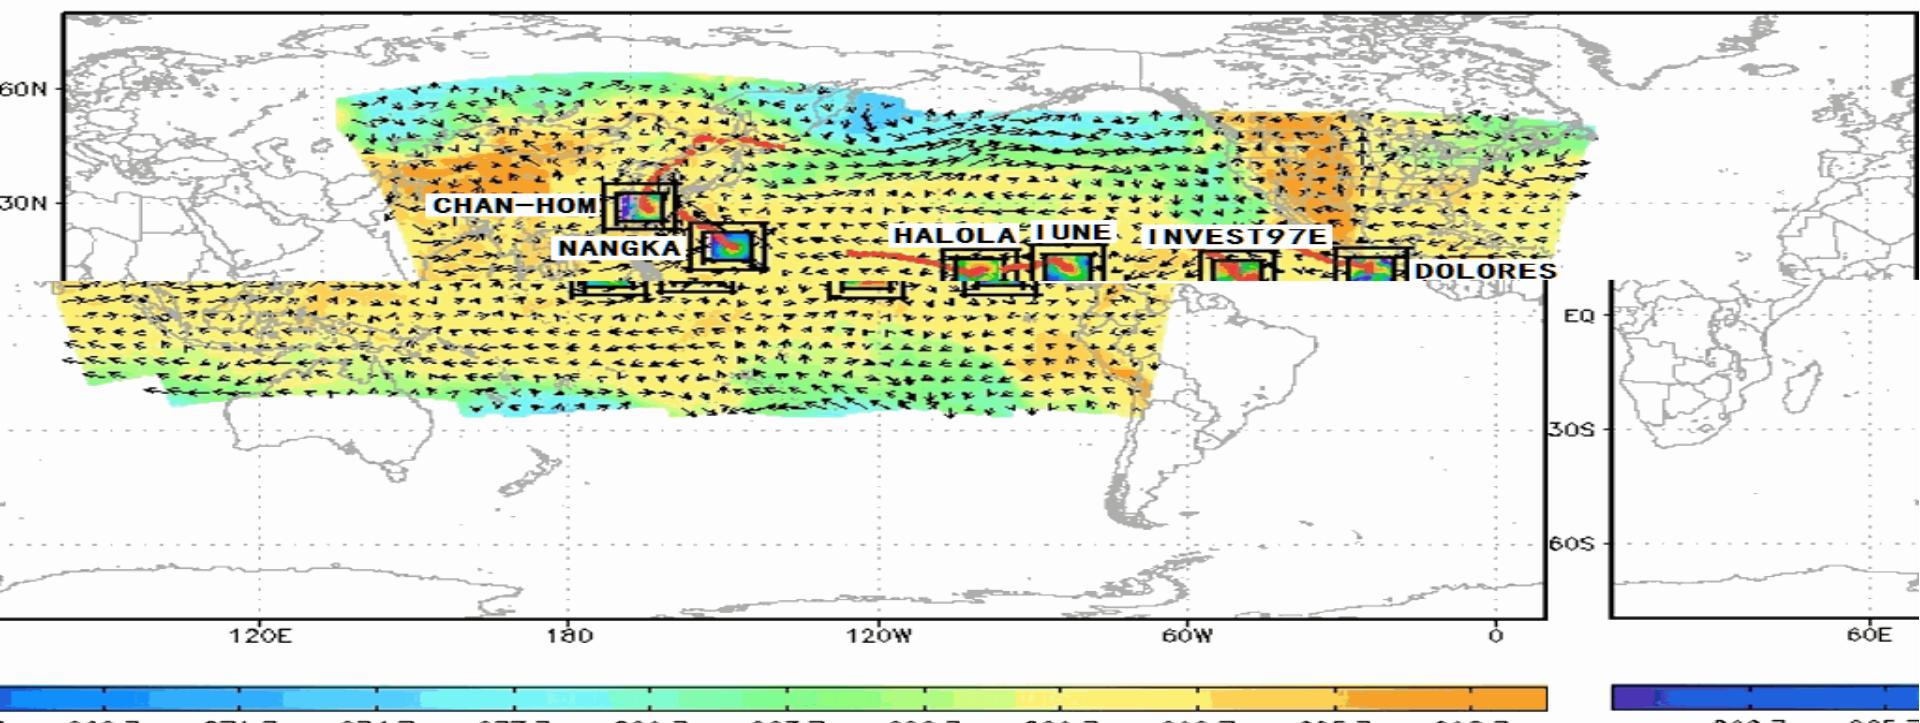

NCEP Operational Hurricane Modeling System (HWRF)

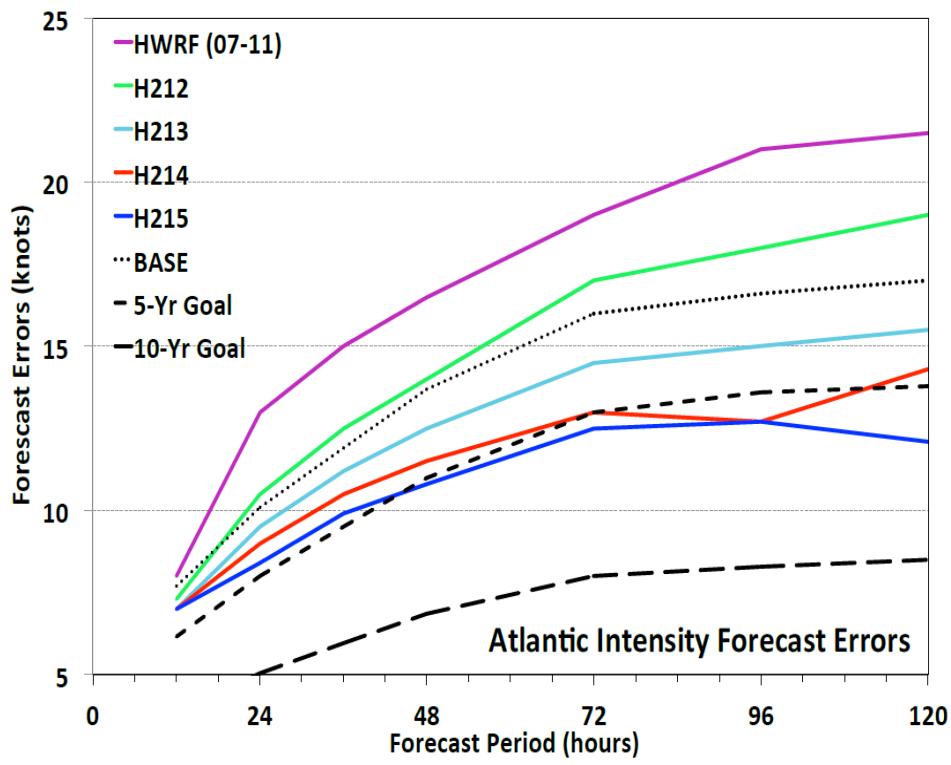

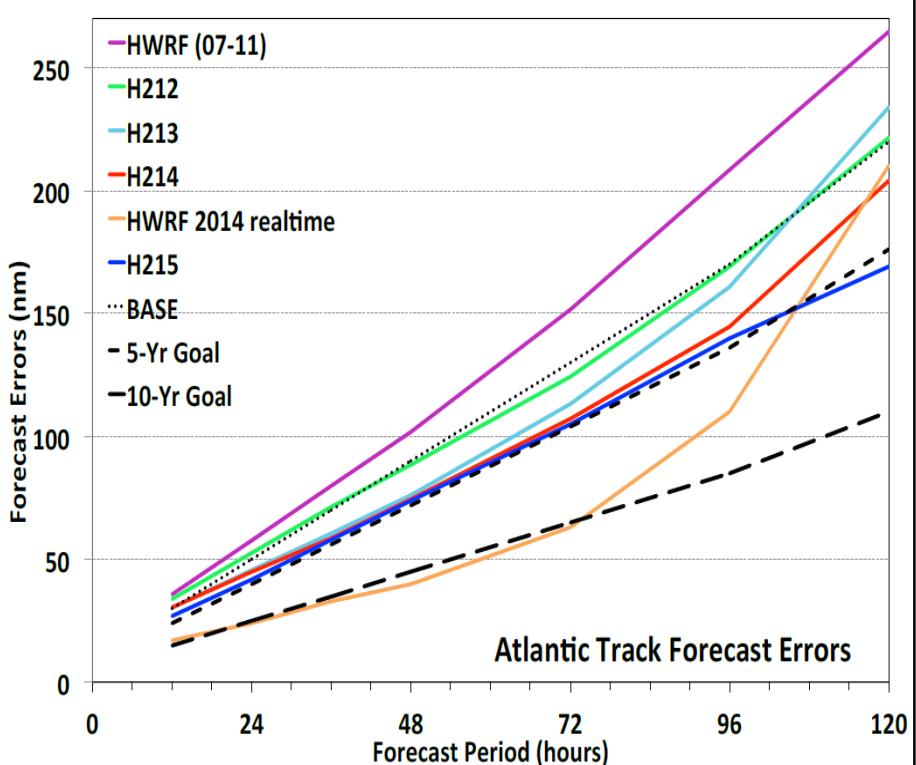

HWRF Forecast init:2015071100 F000

Improvements in Hurricane Forecast Guidance from NCEP Operational HWRF: A Success Story of HFIP

Improvements of the order of 10-15% each year since 2012

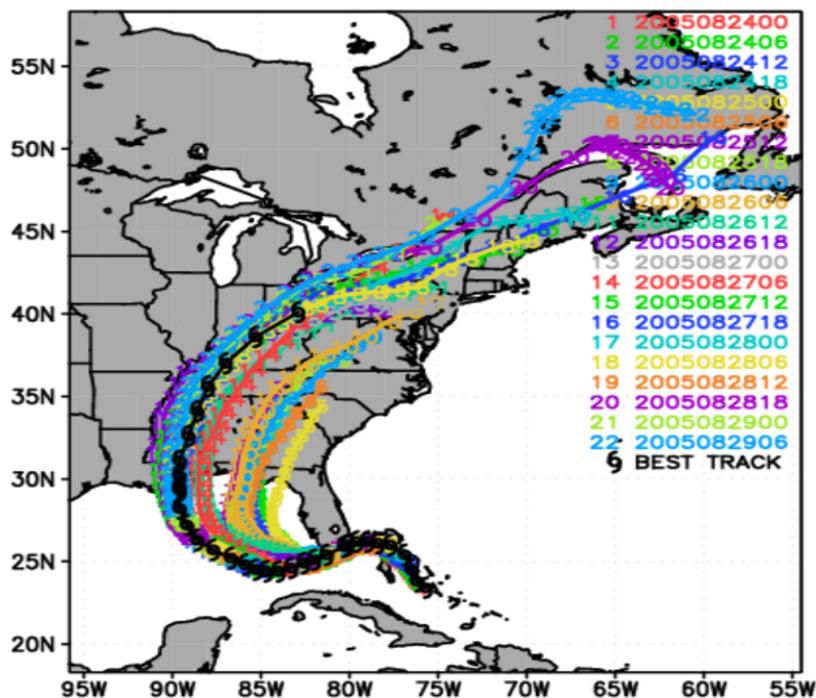

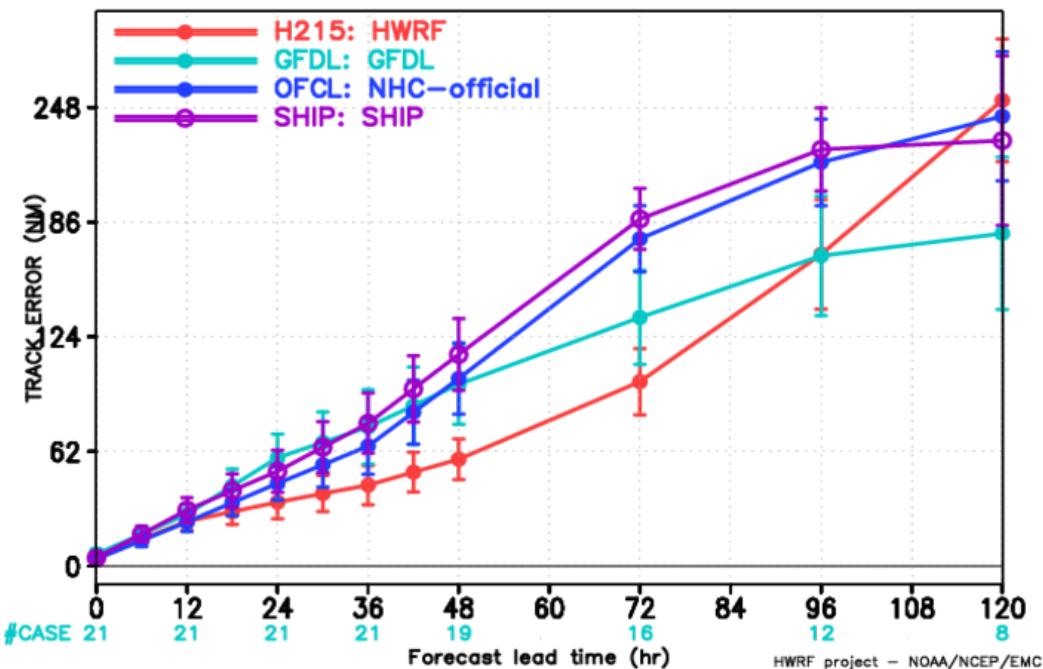

Forecast Performance for Hurricane Katrina using today's Operational HWRF

H215 forecast: KATRINA (al122005)

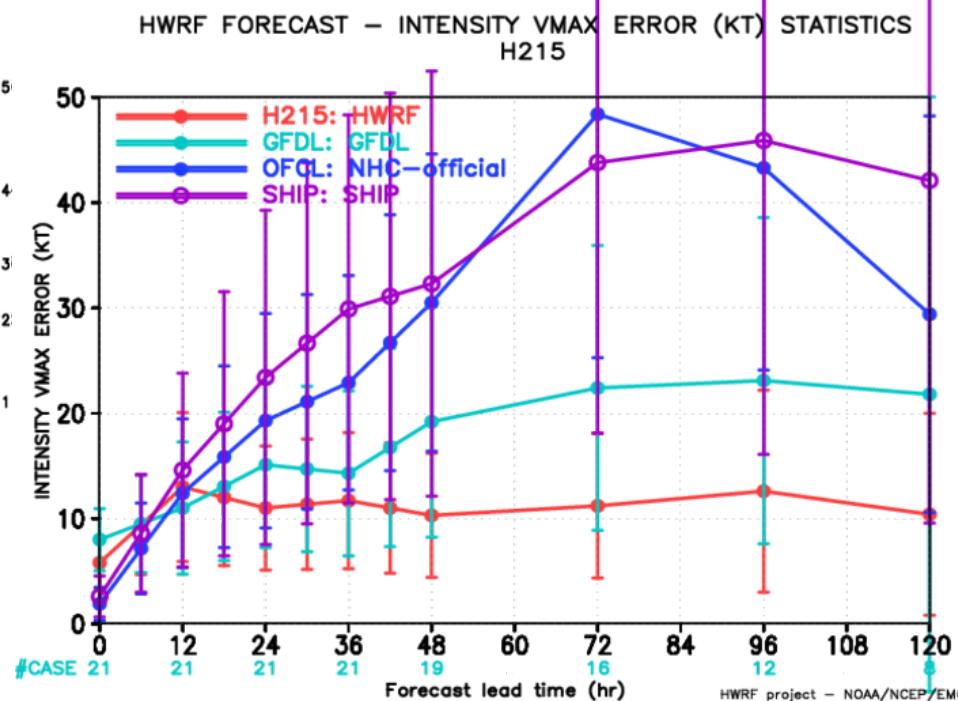

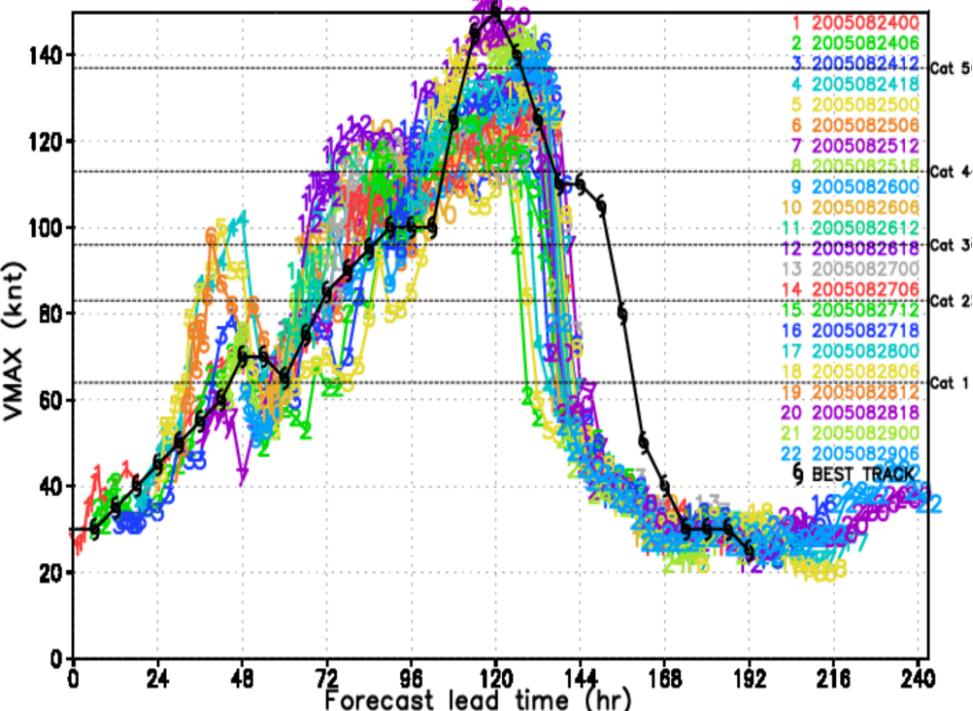

HWRF FORECAST – TRACK ERROR (NM) STATISTICS
H215

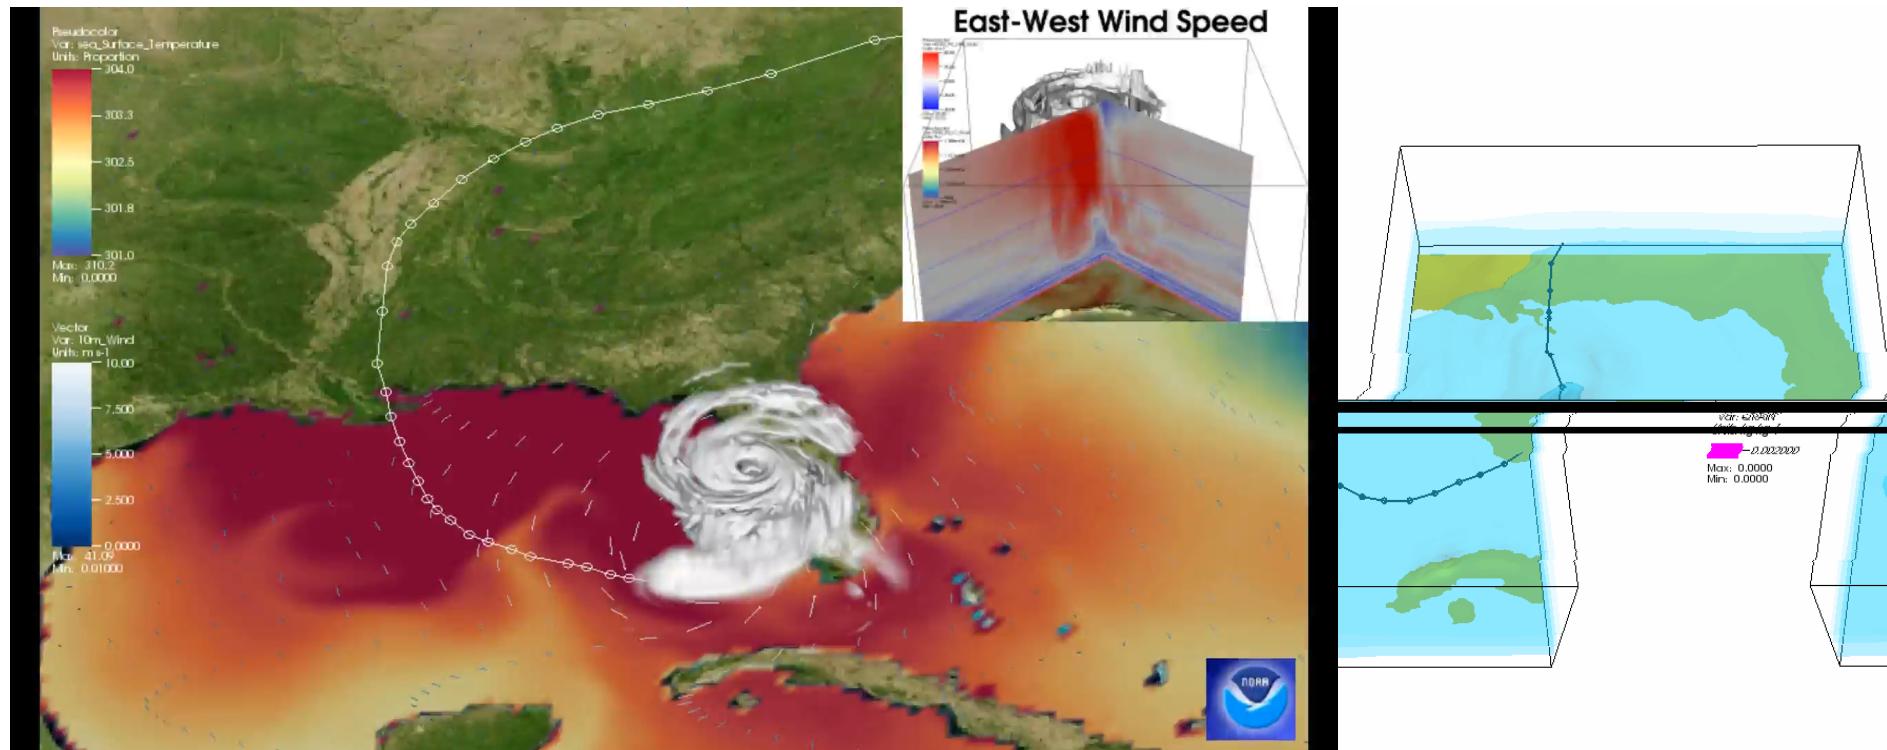

Forecast Performance from Today's Operational HWRF for Hurricane Katrina

H215 forecast: KATRINA (al122005)
Maximum 10-m wind time series

High-Definition Views of Hurricane Katrina as seen by High-Resolution HWRF Simulations

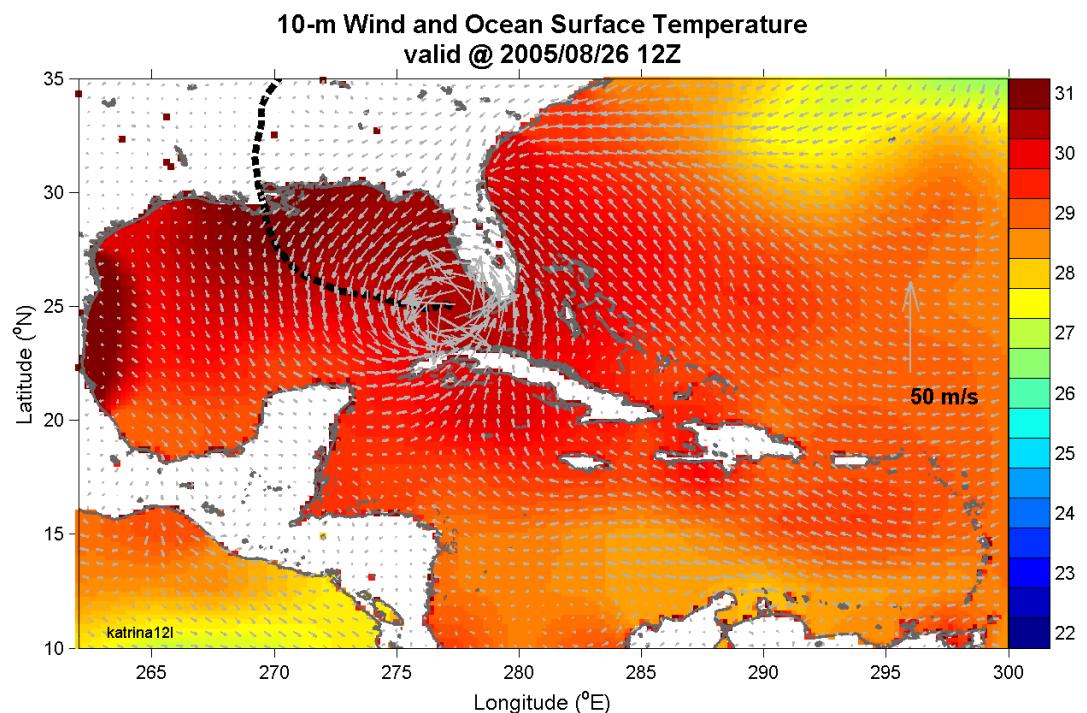

Improved Modeling of Hurricane Dynamics, Physics, and Air-Sea-Wave-Land Interactions

- Hurricane Katrina reminds us of critical and complex interactions between atmosphere, ocean, waves and land – all need to be accurately represented in numerical models for improving the forecast guidance
- NCEP Operational HWRF has demonstrated significant progress in improving the forecasts for high-impact events like Katrina
- Future efforts will continue with emphasis on high-resolution solutions for further improvements in hurricane intensity forecasts

HWRF Future Plans

- HWRF Atmosphere-Land-Ocean-Wave-hydrology coupled with self cycled DA system
- Basin-Scale HWRF with multiple moveable nests and eventual global-to-local scale system in a unified NEMS framework
- Advanced scale-aware and stochastic physics with multi-scale interactions
- HWRF ensembles

Hybrid EnKF-GSI DA system: 2 way coupling
